Prophesy, a Körber product
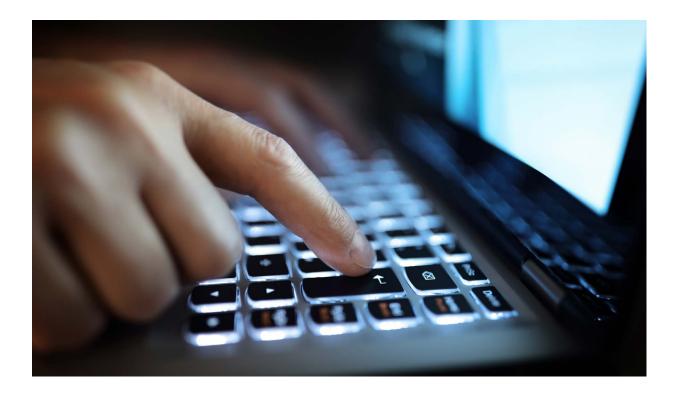

Prophesy Dispatch EDI

Seamlessly integrated EDI to meet your customer's requirements and help you win new business.

Today, many transportation operations are required to use EDI. The Prophesy EDI module seamlessly integrates to your Prophesy Dispatch software, allowing you to perform all transportation-related EDI transactions directly from within Prophesy Dispatch.

The standard transportation-related EDI transaction sets that are supported by the Prophesy module include:

- 204 – Load Tender
- 990 – Acceptance/Decline of Load Tender
- 214 – Load/Shipment Status Update
- 210 – Freight Invoicing

Available options include automatic import of load tender data, integration with mobile communications for status data collection, and auto transmission of status data, to name a few.

EDI data can be transmitted to and from the EDI module via Value Added Network (VAN), FTP/SFTP or AS2 methods.

For more information on the Prophesy EDI module, please contact your Prophesy representative today.
