Prophesy OnDemand

Prophesy OnDemand is the premier web-based transportation management system for growing transportation companies.

Prophesy OnDemand is a fully automated, online dispatch system available on a "pay as you go" basis. This easy-to-use yet powerful transportation management system requires an Internet connection and minimal set up; there's no expensive hardware or software to purchase or upgrade.
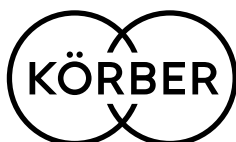

Give your customers access to the information they need directly from your own website. Through our web-based interface, you can allow your customers to enter their shipments, track them through to completion and even pick up images of their PODs — all without picking up a telephone.

Brokers, carriers and shippers love Prophesy OnDemand for its low startup cost, intuitive interface and scalable technology. Our Shipment Progress Notification, just one of many intuitive features, allows you to notify all those in your "need to know" community with real-time shipment progress. From the original order taking, through pickups/in transit locations/deliveries and invoicing. You'll know what's happening, as it happens.

Expanded dispatch features include dispatching to future equipment locations. Broker/3PL and shipper dispatch includes automatic notification of available loads through system generated e-mails and auto linking to an available loads page on your website. Carriers can auto update a shipment's progress directly from an e-mail.

Shippers can broadcast available loads via e-mail to all qualified carriers, search carriers based on historical performance and maintain an ongoing carrier report card. Carriers and brokers can easily create professional quotes and auto-rate orders based on quoted rates. Shippers can select the best carrier based on service performance and cost.

KÖRBER

prophesy
a Körber product

System profile

- Web-based system supports unlimited number of users
- Support for agents (sub and
- independent offices)
- Ideal for Brokerage/3PL/4PL and
- Shipper/ Transportation Management
